

Super Wafer Pads

- SWP - 30 • SWP - 60
- SWP - 40 • SWP - 70
- SWP - 50

Introducing....

SWP is Tomahawk's new design of excellent performance rubber ⁽¹⁾ pad. It consists of four (4) 50 mm square modules, interlinked by a thin web, forming a standard size of 100 mm x 100 mm x 20 mm thick SWP pad. Though SWP in standard use will be of four modules non-separation as a whole, each of its individual module is applicable by cutting the thin web, offering two (2) basic combinations of module sizes as 50 x 50mm & 50 x100mm where and when necessary.

Material

⁽¹⁾(1) SWP pads are molded in:

- Natural Rubber
- Neoprene (Standard)
- Bridge-bearing neoprene
- Polyurethane (PU)

Fig 1.
Single SWP module,
50mm x 50 mm x 20 mm

Typical applications:

- Machine lathes
- Drilling machines
- Punch presses
- HVAC equipment
- Pumps
- Transformers
- Compressors
- Generator sets
- Chillers
- Vent & Utility sets

Standard SWP non-separation modules
100 mm x 100 mm x 20 mm

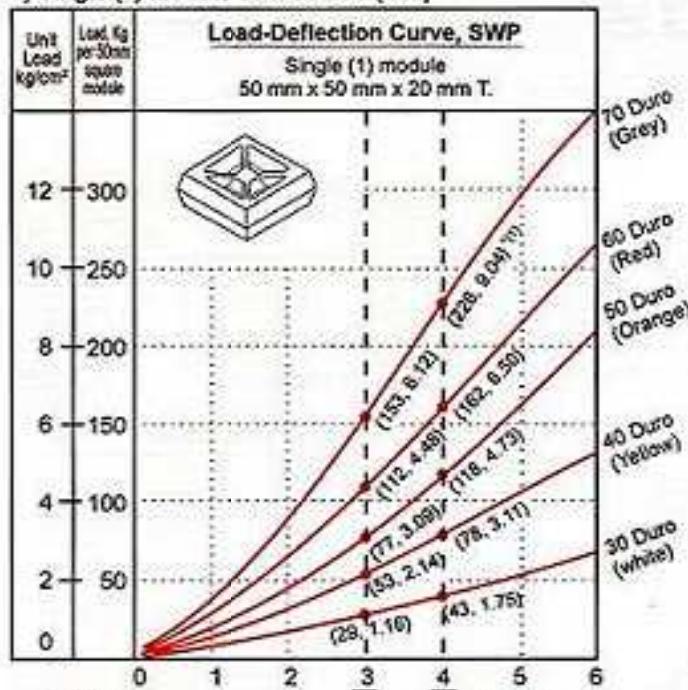

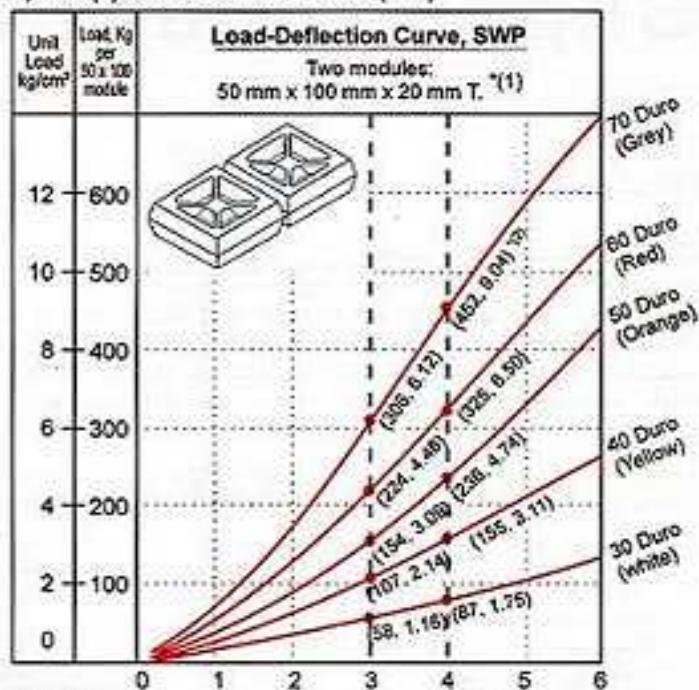

SUPER WAFER PADS

Load-Deflection Characteristics

1) Single (1) module 50 x 50 x 20 (mm)

2) Two (2) modules 50 x 100 x 20 (mm)

3) Standard Application: Non-separation, Four (4) modules 100 x 100 x 20 (mm)

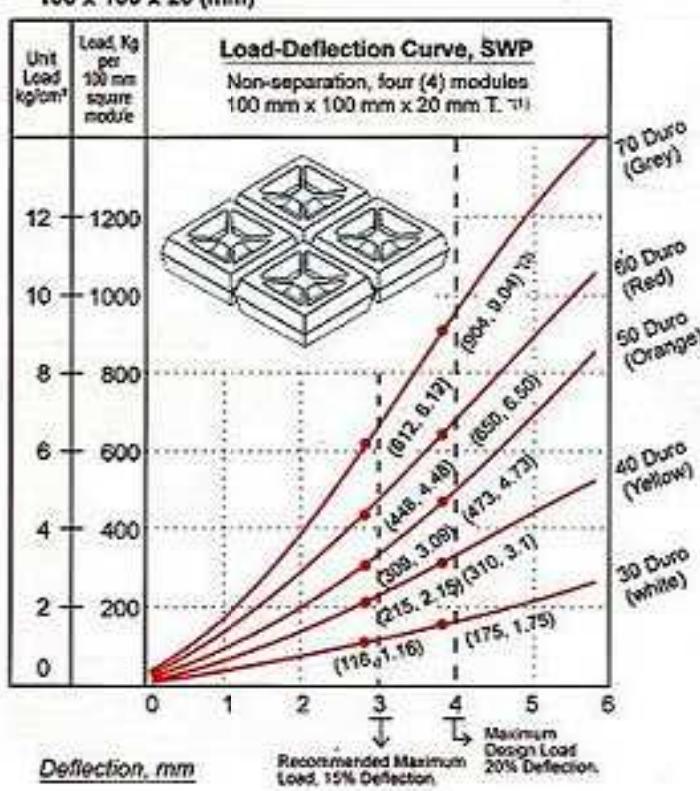

Table 3

Stacking For More Deflection

SWP pads can be stacked to increase deflection (with 1.6 mm or thicker shims) while under the same load. (Example: If 3 layers of pads are stacked thus offering 3 times the deflection of a single layer under the same load).
